

Benefits for your practice

- Direct link to community palliative care providers
- Free in-practice education and support for all practice staff
- Improved interdisciplinary care and outcomes
- Better outcomes for patients and carers

Help improve patient care on their palliative journey.

Opportunity for general practices to improve the quality of life of patients with life-limiting illnesses.

North Western Melbourne Primary Health Network has partnered with the North and West Metropolitan Region Palliative Care Consortium to offer general practices the opportunity to connect with local community based palliative care providers.

Practices can request a visit from a community palliative care team member to provide information, education, and support, and help improve understanding and access to community palliative care services.

Visits can be virtual or in person as COVID-19 guidelines permit. Visits will be arranged by our liaison officer at a time that suits the practice.

Apply now and help enhance the palliative care journey for patients in our region.
