

CEPI COVID-19 Booster Study

How does our immune system respond to different doses of booster vaccines?

The Murdoch Children's Research Institute is recruiting participants aged 18 years or older who have received two doses of either Pfizer or AstraZeneca COVID-19 vaccine and have not yet received a booster dose.

Participants will receive a standard or fractional (reduced) COVID-19 booster dose and will be provided with their antibody test results, which will show their body's immune response to the vaccine.
